1. Priority Classification. Urgent

NOTE

In accordance with AR 95–1, paragraph 6–6A/6-14A, MACOM Commanders may authorize temporary exception from message requirements. Exception may only occur when combat operations or matter of life or death in civil disasters or other emergencies are so urgent that they override the consequences of continued aircraft operation.

a. Aircraft in Use - Upon receipt of this Technical Bulletin, make the following entry on the DA Form 2408–13–1. Enter a red horizontal dash //--// status symbol with the following statement: “Inspect the forward pivoting actuator upper attachment bearing in accordance with CH-47-02-04 (TB 1-1520-240-20-145) prior to next flight.” Clear the red horizontal dash //--// entry when the procedures in accordance with paragraphs 8 and 9 are completed. Commanders who are unable to comply with the requirements of this Technical Bulletin within the time frame specified will upgrade the affected aircraft status symbol to a red //X//.

b. Aircraft in Maintenance –

(1) Aircraft in AVUM, AVIM, or Depot Level Maintenance – Commanders and Facility Managers will not issue aircraft until they are in compliance with this Technical Bulletin.

(2) Aircraft at Contractor Facility – Boeing will inspect DD 250 aircraft prior to those aircraft departing for ferry to final destination.

This TB supersedes USAAMCOM Message 071545Z FEB 02 SOF CH–47–02–04
c. Aircraft in Transit –

NOTE
For aircraft away from home station: After visual inspection for residue, and/or swashplate damage, check for looseness with hydraulic power applied. Have helper move thrust control up and down and observe the actuator to swashplate connection for looseness or play. If residue, and/or swashplate damage, and/or looseness is detected, this safety of flight message procedure shall be performed at the aircraft’s present location.
If residue, and/or swashplate damage, and/or looseness is not detected, this message authorizes a one time flight, with intermediate stops, to return to the nearest secured maintenance facility/home station.

1. Surface/Air Shipment - Same as paragraph 1a.
2. Ferry Status – Same as paragraph 1a.

d. Maintenance Trainers (Category A and B). Inspect the forward pivoting actuator upper attachment bearing in accordance with CH-47-02-04 (TB 1-1520-240-20-145) no later than 8 JUN 02.

Retail Stock – Upon receipt of this Technical Bulletin, Commanders and Facility Managers maintaining retail stock at Installation level and below shall contact the supported aviation unit to perform the procedures required in accordance with paragraphs 8 and 9 on suspect materiel. Dispose of discrepant materiel in accordance with paragraph 10. Report compliance with this Technical Bulletin in accordance with 14c (2) no later than 22 FEB 02.

f. Components/Parts in Work (Depot Level and Others) – Depot and other Maintenance Activity Commanders will ensure items listed in paragraph 6 are not issued until they are in compliance with this Technical Bulletin.

2. Task/Inspection Suspense Date. Prior to next flight but no later than 22 FEB 02.

3. TAMMS Reporting Compliance Suspense Date. Report compliance in accordance with paragraph 14b (1) no later than 12 FEB 02.

4. Summary of the Problem.

a. A quality Deficiency Report has been received from the field documenting that the wrong bearing was installed in the forward pivoting actuator upper attachment. The apparent cause was an error in the parts manual; while this wrong bearing fits properly in the actuator, its inner diameter is too large for the mating bolt.

b. For manpower/downtime and funding impacts see paragraph 12.

c. The purpose of this Technical Bulletin is to require a one time inspection of all H–47 forward pivoting actuator upper attachment bearings for the proper part.

5. End Items to be inspected. All H–47 series aircraft.

6. Assembly Components to be Inspected.

8. Inspection Procedures.

a. Prepare aircraft for safe ground maintenance.

NOTE
Maintainers were installing AFT pivoting actuator bearing in the forward actuator. The suspected wrong part is bearing P/N 145H6600-2. Its outer diameter (OD) is the same as P/N 145HS001-1, but the inner diameter (ID) is different. The --2 inner diameter is 0.6250 + .0000 /-- .0005; the correct --1 inner diameter is 0.5000 + .0000 /-- .0005.

c. Measure inner diameter of bearing on pivoting actuator at swashplate attachment point.

(1) If bearing ID equals .625 inches, proceed to paragraph 8d.

(2) If bearing equals ID .5 inches reconnect forward pivoting servo cylinder per Task 7-131 of reference 13.B (CH-/MH-47D), and Task 7-154 of reference 13.C (MH-47E). Inspection is complete. Proceed to paragraph 9d.

NOTE
For reference 13. D, Figure 244, Item No. 95, and reference E, Figure 7-48, Item No. 95, the part number listing is incomplete and the Usable On Code (UOC) is incorrect. The part number (s) and description and UOC, for both references, should read:

(1) If any of the parts in 8e above do not pass inspection, proceed to paragraph 9a.
(2) If parts pass inspection, proceed to paragraph 9b.

9. Correction Procedures.

a. If any of the parts in paragraph 8e above do not pass inspection:

b. Remove and discard P/N 145HS001-2 bearing per Task 7-129 of Ref. B and Task 7-151 of Ref. C.

c. Using a 10X magnifying glass, visually inspect the forward pivoting actuator to include housing and bearing retainers for damage and abnormal wear. Also, check specifically for rod end hole elongation. Diameter should not exceed 1.1868 inches.

(1) If no damage or abnormal wear is noted, install new 145HS001-1 bearing (inspect bearing ID for proper dimension) per Task 7-129 of reference B and Task 7-151 of reference C. Reinstall forward pivoting actuator (P/N 145H6600-19) per Task 7-131 of Ref. B. (CH-47D/MH-47D), and Task 7-154 of Ref. C (MH-47E). Proceed to paragraph 9.D.

(2) If damage or abnormal wear exists, replace actuator and install new forward pivoting actuator (P/N 145H6600-19) per Task 7-131 of reference B. (CH-47D, MH-47D), and Task 7-154 of reference C. (MH-47E).
